Care Chemicals

Due to legal requirements and regulations of the European Union, BASF SE is obliged to perform animal studies on chemical substances. Within this document animals are regarded as vertebrates. The objective of these studies is to minimize the risk to humans, animals and the environment. Animal studies are centrally monitored by BASF SE to guarantee that the studies commissioned by BASF worldwide are carried out in accordance with the same ethical aspects and animal welfare considerations as those performed within BASF.

BASF's company policy is to eliminate all unnecessary animal testing and to support the development of alternative test methods that involve in vitro testing or that require the minimum possible number of animals. However, alternative test methods are not available for all toxicological end points, and the validation of such test methods again requires the use of animals.

The product is used in chemical and technical applications.

The product has not been tested on animals by BASF. The assessment has been derived from the components or products of similar chemical composition.
